

# SUSTANews

## Extended product range Sustamid® 6G

### Corex rods

In order to economize the machining processes for our customers, we could take a significant step forward. Our Corex rods are already pre-drilled upon delivery, thus saving extra work processes.

These rods are produced in dimensions from 200 to 600 mm in diameter, and in lengths of up to 1250 mm. The drilling has a nominal measurement of 25 mm. The most current dimensions are available ex stock in Sustamid® 6 G natural.

Corex rods

### Pre shaped and custom shaped parts

The direct polymerization of Sustamid in moulds not only enables production of sheets, rods and tubes, but also parts of simple and complex geometries. We make a difference between pre shaped parts, such as semi-finished parts in special dimensions (discs, rings, blocks, profiles, tube segments) and parts with complex geometries designed to customers' drawings. Concerning the production of machine construction parts, our aim

is to reduce the processing time of machining for our customers.

Custom shaped part for an Offshore application.

With our own mould manufacture and our highly modern polymerization plant, we secure fast and competent handling of our customers' projects. We can choose from a variety of materials to produce the necessary moulds ranging from favourable-priced single use moulds, to sheet metal moulds produced in our metal work shop, up to precisely manufactured serial moulds. Our knowledgeable experts have long-term experience both in the production of large series of low-weight pieces, as well as in the production of huge single parts of more than 100 kg.

Custom shaped part for the food industry
